Sladowska

A context sensitive exhibition:

A model, designed as an abstract sculpture of structure, was inspired by a childhood memory of an old derelict wooden roller coaster. I have always been fascinated by the smooth contours of any roller coaster, which are simply triangulations of two-by-four members.

The sculpture is meant to convey dynamic movement through space as a memorable experience. The rendering depicts a dialogue between the sculptural piece and a nineteenth century train shed, which I also have a great love for.
